Application Notes	<p>IACS-010759 (1570496-34-2) is a potent (IC<sub>50</sub> = 1.1 nM isolated mouse complex I) and selective inhibitor of complex I of the mitochondrial electron transport chain (OXPHOS). IACS-010759 displayed in vivo efficacy in glycolysis-deficient glioblastoma and AML models without cytotoxicity to normal cells. The lack of cytotoxicity to normal cells, as opposed to other complex I inhibitors, is attributed to its unique binding location on complex I.<sup>2</sup> Complex I inhibition by IACS-010759 causes an ROS-induced decrease in the endogenous PP2A inhibitor CIP2A leading to cell death.<sup>3</sup> It has also displayed potential in various chemotherapy-resistant cancer cell lines.<sup>4-7</sup></p>
