Application Notes	Etomoxir (828934-41-4) is an irreversible inhibitor of mitochondrial carnitine palmitoyl transferase 1 (CPT1). ¹ It is widely used to study fatty acid oxidation. Etomoxir has been investigated as a therapeutic agent for heart disease ² , diabetes ³ , and cancer ^{4,5} . Use of etomoxir in concentrations greater than 5 µM induces acute production of ROS with associated evidence of severe oxidative stress in proliferating T cells indicating a loss of specificity for CTP1 at these concentrations. ⁶ 200 µM etomoxir inhibited complex I of the electron transport chain. ⁷
