Product Description	Zinc finger genes that encode metal-binding proteins are transcriptional regulators of other genes. Myeloid zinc finger 1 (MZF-1), also designated zinc finger protein 42, and transcription factor ZBP-89, also designated zinc finger protein 148, belong to the MZF family. MZF1 is a 200 kDa protein that contains a zinc finger domain and a nuclear localization signal. It is expressed in various tissues and has been implicated in the regulation of gene expression and cell differentiation.
