Application Notes	L-Cycloserine down-regulates sphingolipid biosynthesis via inhibition of serine palmitoyltransferase (3-ketodihydrosphingosine synthetase). ¹ The L isomer was shown to be 100-fold more potent than the D isomer at inhibition of the brain microsomal enzyme. ¹ It is a useful pharmacological agent for lowering sphingolipid levels in cells ² as well as in animal models ³ . Inhibition of de novo ceramide biosynthesis with L-cycloserine positively affected the senescent phenotype, restoring neuronal signaling and reducing mitochondrial dysfunction in a cortical neuronal model of senescence. ⁴
