Application Notes

Peptide ELISA: antibody detection limit dilution 1:16000. Western Blot: No signal obtained yet but a preliminary experiment showed low background in Human Liver and Molt-4 extract at up to 1ug/ml. However this used our routine western blotting protocol which we would not expect to reliably detect proteins as small as the predicted size of approx. 17KDa according to NP_060519. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates?
