Application Notes

Peptide ELISA: antibody detection limit dilution 1:16000. Western Blot: Preliminary experiments gave bands at approx 170kDa and 26kDa in Human Testis lysates after 1ug/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the bands we observe given the calculated size of 139kDa according to NP_036579.2. Both detected bands were successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?
