Manufacturer	MedchemExpress
Category	Proteine/Peptide
Product Description	The CRABP1 protein is present in the cytoplasm and is involved in regulating the entry of retinoic acid into nuclear retinoic acid receptors. As an important molecular player, CRABP1 may mediate the complex process of interaction between retinoic acid and its receptors. It is known to bind to retinoic acid with high affinity and specificity, facilitating its transport across membranes and its subsequent activation of nuclear receptors.
