Manufacturer	MedchemExpress
Category	Proteine/Peptide
Product Description	The TMED4 protein is complexly involved in vesicular protein trafficking in the early secretory pathway, which is critical for targeting and maintenance of the Golgi apparatus. Its involvement extends to the biosynthesis of secretions, emphasizing its role in the transport of proteins from the endoplasmic reticulum to the Golgi. It is also involved in the regulation of vesicular transport and the maintenance of Golgi structure and function. The protein is a member of the TMED family of proteins, which are characterized by their ability to form membrane vesicles and their role in vesicular transport.
Molecular Weight	Approximately 23-24 kDa, based on SDS-PAGE under reducing conditions, due to the glycosylation.
