| Product Description        | 3,5-Bis-O-benzoyl-2-deoxy-2-fluoro-4-deoxy-arabinouridine is a purine nucleoside analog. Purine nucleoside analogs have broad antitumor activity targeting indolent lymphoid malignancies. Anticancer mechanisms in this process rely on inhibition of DNA... |
| Molecular Weight           | 438.41                                                                                                                                                                                                                                                        |
| CAS Number                 | [136675-87-1]                                                                                                                                                                                                                                                 |
| Formula                    | C23H19FN2O6                                                                                                                                                                                                                                                   |
| Target                     | Nucleoside Antimetabolite/Analog                                                                                                                                                                                                                              |
| Application Notes          | MCE Product type: Oligonucleotides                                                                                                                                                                                                                            |
