| Category                   | Biochemikalien                                                                                                                                                                                                                                                |
| Product Description        | Interleukin-17C (IL-17C) is a 15-20 kDa glycosylated cytokine that plays an important role in mucosal immunity and chronic inflammation. The six IL-17 cytokines (IL-17A-F) are encoded by separate genes but adopt a conserved cystine knot fold. IL-17C ... |
| Molecular Weight           | 22.6 kDa (predicted). Due to glycosylation, the protein migrates to 25 kDa based on Tris-Bis PAGE result.                                                                                                                                                     |
