| Product Description        | 1,4-Dihydro-7-hydroxy-3(2H)-isoquinolinone, can be involved in the photocyclization of N-(chloroactyl)benzylamines to isoquinoline derivatives. Molecular Formula: C <sub>9</sub> H <sub>9</sub> NO <sub>2</sub> Molecular Weight: 163.16999999999999 Storage and Stability: Store at -20C. For ... |
| Molecular Weight           | 163.17                                                                                                                                                                                                                                                                                              |
