| Product Description        | 2-(4-Hydroxyphenyl)benzo[b]thiophen-6-ol is used in the synthesis of Raloxifene (R100000) an estrogen receptor modulator. Molecular Formula: C <sub>14</sub> H <sub>10</sub> O <sub>2</sub> S Solubility: DMSO (Slightly), Methanol (Slightly) Molecular Weight: 242.29 Storage and Stability: St... |
| Molecular Weight           | 242.29                                                                                                                                                                                                                                                                                               |
| Form                       | Supplied as a Pale Grey Solid                                                                                                                                                                                                                                                                        |
