| Product Description        | 2,3,4-Tris-O-(phenylmethyl)-alpha-D-mannopyranose 6-Acetate 1-(2,2,2-Trichloroethanimidate is an intermediate used in the stereocontrolled syntheses of alpha-C-mannosyltryptophan and its analogues. Molecular Formula: C <sub>31</sub> H <sub>32</sub> Cl <sub>3</sub> NO <sub>7</sub> Solubility: Chlorofo... |
| Molecular Weight           | 636.95                                                                                                                                                                                                                                                                                                           |
| Form                       | Supplied as a Colorless Oil                                                                                                                                                                                                                                                                                      |
| CAS Number                 | [208712-66-7]                                                                                                                                                                                                                                                                                                    |
