| Immunogen                  | Synthetic peptide corresponding to the C-terminal region of human ITGAM                                                                                                                                                                                       |
| Product Description        | This gene encodes the integrin alpha M chain. Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. This I-domain containing alpha integrin combines with the beta 2 chain (ITGB2) to form a leukocyte-speci... |
