| Product Description        | 3,4-Dimethoxybenzenesulfonyl Chloride is used in the synthesis of aryl sulfonamides as selective carbonic anhydrase IX and XII inhibitors. Molecular Formula: C <sub>8</sub> H <sub>9</sub> ClO <sub>4</sub> S Solubility: Chloroform, Ethyl Acetate Molecular Weight: 236.67 Storage and Stabili... |
| Molecular Weight           | 236.67                                                                                                                                                                                                                                                                                               |
| Form                       | Supplied as a Off-White Solid                                                                                                                                                                                                                                                                        |
