| Product Description        | Butyl Oleate is used to fabricate nanoporous anatase TiO <sub>2</sub> mesocrystals with tunable architectures and crystal phases. Also, it improves palmarumycins C12 and C13 production in suspension culture of Berkleasmium sp. Dzf12. Molecular Formula: C <sub>22</sub> H <sub>42</sub> O <sub>2</sub> ... |
| Molecular Weight           | 338.57                                                                                                                                                                                                                                                                                                          |
| Form                       | Supplied as a Clear Colorless Oil                                                                                                                                                                                                                                                                               |
