Application Notes	The product, in combination with filgrastim, is indicated for the setting of autologous peripheral blood progenitor cell transplantation in patients at risk of poor peripheral blood progenitor cell mobilisation. The use of ancestim with filgrastim will generate a sustained increase in the number of peripheral blood progenitor cells capable of engraftment. It is used for mobilization of progenitor cells from the bone marrow to the peripheral blood with or without mobilizing chemotherapy. The harvested progenitor cells can be used for transplant following myelosuppressive or myeloablative therapies.
