Product Description	This gene belongs to the human Ly6 gene family and encodes a glycosylphosphatidylinositol (GPI)anchored cell surface protein. The protein plays an important role in T cell physiology, oncogenesis and immunological regulation. The protein is also involved in the regulation of the cell cycle and apoptosis. It is expressed in various tissues and cell types, including the brain, heart, liver, and spleen. The protein is a member of the Ly6 subfamily of the Ig-like superfamily and is characterized by its ability to bind to the extracellular matrix and to other proteins. It is also involved in the regulation of cell adhesion and migration. The protein is a target for therapeutic intervention in various diseases, including cancer and autoimmune disorders.
