Application Notes	<p>GZMM (Granzyme M) is one of the neutral serine proteases, which is specifically expressed by NK cells and mediates a novel major and perforin-dependent cell death pathway. Granzyme M has been proven to targets alpha-Tubulin and disorganizes the microtubule network, besides, Ezrin has also been identified as a substrate of GZMM. Therefore, a catalytic assay was conducted to detect the protease activity of recombinant human GZMM using Hela cells lysates. Briefly, protein lysates were extracted from 2×10^7 Hela cells using Lysis Buffer, then incubated with normal or inactivated GZMM in 37C for 4h. Samples were immunoblotted using Abs beta-actin as control, and Ezrin to detect the enzyme activity. And the recombinant human GZMM cleaved Ezrin.</p>
