Application Notes	RITA (reactivation of p53 and induction of tumor cell apoptosis) binds to p53 ( $K_d = 1.5 \text{ nM}$ ), changing its conformation, preventing it from binding to HDM2 (human ortholog of MDM2, Mouse Double-Minute clone 2), and targeting it for proteasomal degradation. <sup>1</sup> It also weakly (computed $K_d = 22 \text{ }\mu\text{M}$ ) binds HDM2 in the cleft that contacts the p53 transactivation domain. <sup>2</sup> Its restoration of mutant p53 function depends on eIF2alpha phosphorylation, and it induces apoptosis via p53-dependent and -independent (JNK/SAPK/p38, protein translation) pathways. <sup>3-5</sup> Induces senescence in head and neck cancer cells. <sup>6</sup>
