Application Notes	Cycloastragenol is a novel naturally occurring terpenoid found in <i>Astragalus</i> which was shown to be a telomerase activator. In CD8+ T lymphocytes from HIV-infected donors it retarded telomere shortening, increased proliferative potential and enhanced cytokine/chemokine production and antiviral activity. ¹ It suppressed lung damage in a idiopathic pulmonary fibrosis mouse model. ² It has also been shown to be a novel senolytic agent, inducing senescent cell apoptosis and restoring physical function in mice with irradiation-induced aging. ³
