Application Notes	SR3335 (293753-05-6) is a selective RORalpha partial inverse agonist (IC50 = 480 nM) - displays no activity at ROR $\beta$ , RORgamma, or FXR.1 It was able to suppress gluconeogenesis in diet-induced obese mice. SR3335 was able to upregulate uncoupling protein 1 (UCP1), a unique mitochondrial protein devoted to thermogenesis, in wild type mice leading to decreased body weight and fat mass. <sup>2,3</sup> It inhibited the development of mouse and human TH17 cells in vitro and in vivo leaving thymic T cells intact. <sup>4</sup> SR3335's ability to block pathogenic, but not protective TH17 cell function makes it an important new tool in the study of TH17-mediated inflammatory and autoimmune diseases.
