Application Notes	SBI-553 is a potent, brain penetrant, and orally bioavailable allosteric modulator of neurotensin receptor 1 (NTSR1, EC50 = 340 nM). ¹ It acts as a β-Arrestin-biased agonist and selectively antagonizes G protein signaling conferring profound β-Arrestin bias towards the endogenous ligand. ^{2,3} SBI-553 displayed efficacy in mouse models of psychostimulant abuse without the characteristic undesirable side effects of unbiased NTSR1 agonism. This functionally selective modulation of NTSR1 may be a new therapeutic approach to treating psychostimulant abuse and other chemical and behavioral addictions.
