| Product Description        | Sialic acid-binding immunoglobulin (Ig)-like lectins, or SIGLECs (e.g., CD33 (MIM 159590)), are a family of type 1 transmembrane proteins each having a unique expression pattern, mostly in hemopoietic cells. SIGLEC8 is a member of the CD33-like subgr... |
| Clonality                  | Monoclonal                                                                                                                                                                                                                                                    |
| Concentration              | FC                                                                                                                                                                                                                                                            |
| Molecular Weight           | 44kDa/46kDa/54kDa                                                                                                                                                                                                                                             |
| NCBI                       | <a href="#">27181</a>                                                                                                                                                                                                                                         |

|                    |                                                                                                                                                                         |
