| Conjugation                | PE/Cy5.5                                                                                                                                                                                                                                                              |
| Product Description        | The leucine-rich (LRR) repeat is a 20-30 amino acid motif that forms a hydrophobic $\alpha$ / horseshoe fold, allowing it to accommodate several leucine residues within a tightly packed core. All LRR repeats contain a variable segment and a highly conserved ... |
| Clonality                  | Polyclonal                                                                                                                                                                                                                                                            |
| Concentration              | 1ug/ul                                                                                                                                                                                                                                                                |
| NCBI                       | <a href="#">10233</a>                                                                                                                                                                                                                                                 |
| Buffer                     | Aqueous buffered solution containing 0.01M TBS (pH7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol.                                                                                                                                                                |
