| Conjugation                | Cy5.5                                                                                                                                                                                                                                                          |
| Product Description        | Adenylosuccinate lyase is involved in both de novo synthesis of purines and formation of adenosine monophosphate from inosine monophosphate. It catalyzes two reactions in AMP biosynthesis: the removal of a fumarate from succinylaminoimidazole carboxam... |
| Clonality                  | Polyclonal                                                                                                                                                                                                                                                     |
| Concentration              | 1ug/ul                                                                                                                                                                                                                                                         |
| Buffer                     | Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1% BSA, 0.02% Proclin300 and 50% Glycerol.                                                                                                                                                        |
| Source                     | KLH conjugated synthetic peptide derived from human Adenylosuccinate Lyase                                                                                                                                                                                     |
