| Category                   | Biochemikalien                                                                                                                                                                                                                                                |
| Product Description        | An oxidative metabolite of Dasatinib (M5 metabolite). Dasatinib N-oxide is a major metabolite of the Abl and Src kinase inhibitor dasatinib and a potential impurity in commercial preparations of dasatinib. Synonyms: N-[2-Chloro-6-methylphenyl]-2-[[6-... |
| Molecular Weight           | 504                                                                                                                                                                                                                                                           |
| Purity                     | 95% (HPLC) (Typically 99%)                                                                                                                                                                                                                                    |
| Form                       | Off-white to pale yellow solid                                                                                                                                                                                                                                |
| CAS Number                 | [910297-52-8]                                                                                                                                                                                                                                                 |
