| Product Description        | 4-Hydroxypiperidine-d5 Hydrochloride is an isotopic analogue of 4-Hydroxypiperidine (H950845) which is used as a reagent for the synthesis of acridine (A190900) derivatives and fibrinogen receptor antagonists. Molecular Formula: C <sub>5</sub> H <sub>6</sub> D <sub>5</sub> NO (HCl) Molec... |
| Molecular Weight           | 106.183646                                                                                                                                                                                                                                                                                          |
