Application Notes	<p>This Rat Toll-interacting protein (TOLLIP) ELISA Kit employs a two-site sandwich ELISA to quantitate TOLLIP in samples. An antibody specific for TOLLIP has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TOLLIP present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TOLLIP is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TOLLIP bound in the initial step. The color development is stopped and the intensity of the color is measured.</p>
