Application Notes

This Human Zymogen granule protein 16 homolog B (ZG16B) ELISA Kit employs a two-site sandwich ELISA to quantitate ZG16B in samples. An antibody specific for ZG16B has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any ZG16B present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for ZG16B is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of ZG16B bound in the initial step. The color development is stopped and the intensity of the color is measured.
