Application Notes	<p>Human Tumor necrosis factor receptor-associated factor 6 (TRAF6) ELISA Kit employs a two-site sandwich ELISA to quantitate TRAF6 in samples. An antibody specific for TRAF6 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TRAF6 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human TRAF6 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of TRAF6 bound in the initial step. The color development is stopped and the intensity of the color is measured.</p>
