Application Notes

Human Soluble tumor necrosis factor-like weak inducer of apoptosis (sTWEAK) ELISA Kit employs a two-site sandwich ELISA to quantitate sTWEAK in samples. An antibody specific for sTWEAK has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any sTWEAK present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human sTWEAK detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of sTWEAK bound in the initial step. The color development is stopped and the intensity of the color is measured.
