Application Notes

This Human Cell cycle control protein 50A (TMEM30A) ELISA Kit employs a two-site sandwich ELISA to quantitate TMEM30A in samples. An antibody specific for TMEM30A has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TMEM30A present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TMEM30A is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TMEM30A bound in the initial step. The color development is stopped and the intensity of the color is measured.
