Application Notes

This Human Protein phosphatase Slingshot homolog 2 (SSH2) ELISA Kit employs a two-site sandwich ELISA to quantitate SSH2 in samples. An antibody specific for SSH2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any SSH2 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for SSH2 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of SSH2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
