Application Notes

Human Lysosomal acid phosphatase (ACP2) ELISA Kit employs a two-site sandwich ELISA to quantitate ACP2 in samples. An antibody specific for ACP2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any ACP2 present is bound by the immobilized antibody. After removing any unbound substances, HRP-Conjugate Human ACP2 detection antibody is added to the wells. Following a wash to remove any unbound HRP reagent, a Chromogen solution is added to the wells and color develops in proportion to the amount of ACP2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
