Application Notes

This Human Myosin-XV (MYO15A) ELISA Kit employs a two-site sandwich ELISA to quantitate MYO15A in samples. An antibody specific for MYO15A has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MYO15A present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MYO15A is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MYO15A bound in the initial step. The color development is stopped and the intensity of the color is measured.
