Application Notes

This Human Metastasis suppressor protein 1 (MTSS1) ELISA Kit employs a two-site sandwich ELISA to quantitate MTSS1 in samples. An antibody specific for MTSS1 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MTSS1 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MTSS1 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MTSS1 bound in the initial step. The color development is stopped and the intensity of the color is measured.
