Application Notes

This Human 28S ribosomal protein S28, mitochondrial (MRPS28) ELISA Kit employs a two-site sandwich ELISA to quantitate MRPS28 in samples. An antibody specific for MRPS28 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MRPS28 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MRPS28 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MRPS28 bound in the initial step. The color development is stopped and the intensity of the color is measured.
