Application Notes

This Human Mpv17-like protein (MPV17L) ELISA Kit employs a two-site sandwich ELISA to quantitate MPV17L in samples. An antibody specific for MPV17L has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MPV17L present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MPV17L is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MPV17L bound in the initial step. The color development is stopped and the intensity of the color is measured.
