Application Notes

This Human DNA replication licensing factor MCM2 (MCM2) ELISA Kit employs a two-site sandwich ELISA to quantitate MCM2 in samples. An antibody specific for MCM2 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any MCM2 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MCM2 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MCM2 bound in the initial step. The color development is stopped and the intensity of the color is measured.
