Application Notes	<p>This Mouse TRAF2 and NCK-interacting protein kinase (TNIK) ELISA Kit employs a two-site sandwich ELISA to quantitate TNIK in samples. An antibody specific for TNIK has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TNIK present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TNIK is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TNIK bound in the initial step. The color development is stopped and the intensity of the color is measured.</p>
