Application Notes

This Mouse Matrix metalloproteinase 2 antibody (MMP2-Ab) ELISA Kit employs a two-site sandwich ELISA to quantitate MMP2-Ab in samples. An antibody specific for MMP2-Ab has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyMMP2-Ab present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for MMP2-Ab is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of MMP2-Ab bound in the initial step. The color development is stopped and the intensity of the color is measured.
