Application Notes	All-trans-Retinoic acid (ATRA, a metabolite of Vitamin A) is an endogenous ligand for the retinoic acid receptor (RAR). The binding of retinoic acid to the RAR and retinoid X (RXR) heterodimer causes conformation changes in RAR that affects the binding of other proteins that regulate the growth and differentiation of a variety of both normal and malignant cells. ¹ ATRA promotes differentiation of embryonic stem cells (ESCs) into a variety of cell types in vitro. ²⁻⁴
