Application Notes	After incorporation into DNA, it disrupts cytosine methylation by DNA methyltransferases in vitro and acts as a DNA demethylating agent in vivo. ¹ It reactivates epigenetically silenced genes in acute lymphoblastic leukemia cells by facilitating proteasome-mediated degradation of DNA methyltransferase (DNMT1). ² Incorporates into DNA and induces double strand breaks which destabilize DNA structure resulting in cytotoxicity. ³ Selectively kills BRCA2-defective tumors and overcomes PARP inhibitor resistance in a xenograft model. ⁴ Anticancer and immunosuppressive activity.
