Application Notes	A high affinity synthetic ligand for both RORalpha and RORgammat acting as an inverse agonist. It binds specifically to the ligand-binding domain, inducing a conformational change which leads to diminished affinity for co-activators and increased affinity for co-repressors resulting in suppression of transcriptional activity ¹ . It inhibits the development of murine TH17 cells ² and suppresses the expression of cytokines ¹ . Suppresses insulinitis and prevents hyperglycemia in a type 1 diabetes mouse model ³ . Protects against pathologic neovascularization in various mouse models of retinopathy ⁴ . Active in vivo
