Application Notes	Levetiracetam is a clinically useful non-classical anticonvulsant. ¹ It has no effect on voltage-dependent Na ⁺ channels, GABAergic transmission, or affinity for either GABAergic or glutaminergic receptors. ^{2,3} Levetiracetam is believed to act via binding to the synaptic vesicle protein SV2A. ⁴ Levetiracetam reduced intra-neuronal Ca ²⁺ levels by inhibition of ryanodine and IP3 receptor-dependent Ca ²⁺ release from the endoplasmic reticulum. ⁵ It was also observed to lower the pH of neocortical pyramidal cells via weakening of the transmembrane HCO ₃ ⁻ -mediated acid-extrusion. ⁶
