Application Notes	<p>PRIMA-1MET reactivates mutant p53, an important tumor suppressor gene, in cancer cells.¹ It induces p53-dependent mitochondrial apoptosis via activation of caspase-2.² PRIMA-1MET showed significant antitumor activity in multiple myeloma via activation of p73³ and had previously been shown to target p53 family members p63 and p73⁴. Tumor cell death by PRIMA-1MET has been also shown to be caused by glutathione depletion and induced ROS production in a p53 independent manner.⁵⁻⁷ PRIMA-1MET probably induces tumor cell death by both reactivating mutant p53 and inhibiting cellular thiol-dependent redox systems.⁸</p>
