Application Notes	<p>SPHINX31 is a potent (IC<sub>50</sub> = 5.9 nM) and selective inhibitor of serine/arginine-rich protein kinase 1 (SRPK1), a splice factor kinase involved in VEGF-A isoform formation and other alternative splicing events.<sup>1</sup> It displayed antiangiogenic effects in a mouse model of choroidal neovascularization<sup>1</sup> a rat model of diabetic retinopathy<sup>2</sup>. SPHINX31 exhibited antitumor and synergistic (with cisplatin) effects in extranodal lymphoma cells.<sup>3</sup> It was able to change splicing of programmed cell death receptor 1 (PD-1) to produce a more soluble form that prevented T cell exhaustion in a cancer model.<sup>4</sup> It corrected BIN1, MCL-1, and BCL2 splicing errors in cholangiocarcinoma cells resulting in apoptosis of cancer cells.<sup>5</sup></p>
