Application Notes	MDL29,951 is a new, highly specific, small molecule activator of GPR171 that has been shown to be active in intact cells <sup>1</sup> . The ability to specifically activate GPR17 allows for the study of the exact role GPR17 plays in the maturation of oligodendrocytes and may lead to a therapeutic strategy to promote myelin repair. Antagonist for the strychnine-insensitive glycine binding site of the NMDA receptor (IC <sub>50</sub> = 170 nM). <sup>2</sup>
