Application Notes	Mitoguazone is a potent and reversible inhibitor of S-adenosylmethionine decarboxylase (SAMDC or AdoMetDC). ^{1,2} SAMDC is a component of the polyamine-biosynthetic pathway, thus inhibition may lead to changes in polyamine metabolism. ³ Mitoguazone has also been shown to inhibit diamine oxidase and induce spermidine/spermine N-acetyltransferase. ^{4,5} Mitoguazone has been looked at as a potential anti-cancer treatment because of its ability to inhibit polyamine synthesis. ⁶
